

Privacy Policy for ClassForge Offline

Last updated: June 26, 2026

ClassForge Offline is a Chrome Extension developed by D'Labs Digital Solutions. This privacy policy explains how ClassForge Offline handles data when instructors use the extension.

1. Overview

ClassForge Offline is designed as an offline instructor class toolkit. It helps instructors manage class lists, randomly pick students, generate groups, record attendance, manage grades, run countdown timers, and export backup files.

ClassForge Offline is built to work locally inside the user's Chrome browser. It does not require an online account, external server, or cloud database to use its main features.

2. Information Stored by the Extension

ClassForge Offline may store the following information locally in the user's browser profile:

- Class names and class details
- Student names
- Attendance records
- Attendance notes
- Grade records
- Activity or exam names
- Group generator results
- Random picker history
- Timer settings
- Extension preferences
- Backup and export settings
- Instructor Lock settings

This information is entered and managed by the user.

3. How Information Is Used

The information stored by ClassForge Offline is used only to provide the extension's classroom management features, including:

- Managing class lists
- Picking random students
- Creating random groups
- Recording attendance

- Recording grades
- Exporting CSV files
- Creating JSON backups
- Restoring data from backups
- Protecting access through Instructor Lock

ClassForge Offline does not use this information for advertising, tracking, profiling, or analytics.

4. Local Storage and Offline Use

ClassForge Offline stores data locally in the user's Chrome browser profile. The extension does not automatically upload class records, student names, attendance, grades, or Instructor Lock settings to any external server.

Users are responsible for managing their own exported JSON and CSV files. If a user exports a backup or CSV file, that file is saved by the user and may be stored wherever the user chooses.

5. Data Sharing

ClassForge Offline does not sell, rent, trade, or share user data with third parties.

ClassForge Offline does not send student names, class records, attendance records, grades, or exported data to D'Labs Digital Solutions or to any external service.

6. Internet Access

ClassForge Offline is designed to work offline. The extension does not require internet access for its core features.

Some external links may be shown, such as the D'Labs Digital Solutions website or optional reference links. Opening those links is controlled by the user and happens outside the extension's local data storage.

7. Permissions Used

ClassForge Offline may request Chrome storage-related permissions. These permissions are used to save the extension's local data and settings in the user's browser profile.

The extension does not access browsing history, website content, passwords, cookies, or personal files on the device.

8. Instructor Lock

ClassForge Offline includes an Instructor Lock feature to help prevent casual access to the toolkit while the browser is open. Instructor Lock may use a PIN and optional authenticator code.

Instructor Lock is intended as an added access-control feature for the extension. Users should still protect their device, Chrome profile, and exported files using proper device security practices.

9. Data Export and Backup

ClassForge Offline allows users to manually export data as JSON backup files or CSV files.

These exported files are created only when the user chooses to export them. The user is responsible for storing, sharing, protecting, or deleting exported files.

10. Data Deletion

Users can delete data inside the extension by removing saved class records, attendance records, grades, or other stored items.

Users may also remove all locally stored extension data by uninstalling the extension or clearing the extension's stored data from Chrome.

11. Children's Privacy

ClassForge Offline is intended for use by instructors, teachers, or authorized school personnel. The extension may store student names and classroom records if entered by the instructor.

Users are responsible for ensuring that their use of the extension complies with their school policies and applicable privacy requirements.

12. Changes to This Privacy Policy

D'Labs Digital Solutions may update this privacy policy when ClassForge Offline changes its features, data handling, or permissions.

The updated privacy policy will be posted on this page with a revised "Last updated" date.
